

# Certified Data Centre Management Professional - CDCMP™

## Qualification Overview

The Certified Data Centre Management Professional qualification (CDCMP™) equips data centre professionals to substantially improve operational efficiency, by understanding key management fundamentals relevant to data centre operations. The qualification begins with an initial three day core module, which upon successful completion awards an individual with Certified Data Centre Management (CDCM™), a BTEC level 3 qualification. Following the core module are four specialist one day modules focusing on the key areas of Auditing, Physical, Strategies and Compliance. Upon completion of the full seven day program the successful delegate is awarded the Certified Data Centre Management Professional (CDCMP™), a BTEC level 5 qualification.

This BTEC qualification from Edexcel is intended to furnish data centre professionals with depth and breadth of learning and to provide independently verified proof of competency. The unit based structure of the overall qualification allows flexibility to take each unit at your convenience over a period of time.
